

CHRIST (Deemed to be University), Bangalore
Department of Computer Science

Course Code: MAI412-2

Course: Full Stack Development

Domain Selection & Prototype Development Guidelines

Objective: Identify a real-world problem with potential for AI/ML intervention and plan a Full Stack application that can be progressively developed throughout the semester.

Task:

Each student/team should select:

1. Domain

Choose one suitable domain, for example:

- AI in Education
- Healthcare & Wellness
- Agriculture & Food Technology
- Financial Technology
- Cybersecurity
- Smart Campus
- Sustainability & Environment
- Business & Retail
- Transportation & Mobility
- Tourism & Hospitality
- Human Resources
- Accessibility & Assistive Technology
- Social/Community Development
- AI & Digital Transformation
- Any other related domain

2. Identify a Real Problem

Write: What problem are you trying to solve?

Example:

- **Domain:** Education
- **Problem:** Students find it difficult to identify suitable learning resources based on their learning gaps.

3. Proposed AI/ML Opportunity

Students should identify where AI/ML could add value.

For example:

- Prediction
- Recommendation
- Classification
- Personalization
- Anomaly detection
- Sentiment analysis
- Text summarization
- Intelligent search
- Forecasting
- Chatbot/AI assistant

Example: AI Component: Recommend learning resources based on student performance and interests.

4. Full Stack Application

Students should briefly identify what their web application will manage.

For example: User → React Frontend → Node + Express → MongoDB → AI/ML Service → Prediction / Recommendation

Submission thru Shared Sheet:

1. Domain and Problem Statement
2. Target Users
3. Proposed Solution with AI/ML Opportunity
